Quick Ship

 Same day shipment on all stock heaters with post terminals or Type B leads.

Band Heaters

MI Barrel and Nozzle

The MI Band is a high performance heater. Its performance and name are derived from Watlow's exclusive mineral insulation—a material that has much higher thermal conductivity than the mica and hard ceramic insulators used in conventional heaters.

A thin layer of the "high" thermal conductive MI material is used to electrically insulate the element wire from the inside diameter of the heater sheath. A thicker, "low" thermal conductivity layer backs up the element wire, directing the heat inward towards the part that is being heated. The result is more efficient heat transfer ... a performance solution that lowers element wire temperatures and increases heater life.

Performance Capabilities

- Heater operating temperatures to 1400°F (760°C)
- Watt densities to 230 W/in²
 (35.6 W/cm²) available on small diameter nozzle bands
- Watt densities to 100 W/in² (15.5 W/cm²) available on large diameter barrel bands

Features and Benefits

- Operating temperatures to 1400°F (760°C) make it possible to safely melt even the newest resins, like Peek®, Teflon®, Ultem® and Zytel®.
- Higher watt densities than any other band contribute to faster heat-up and through-put to increase productivity.
- High thermal conductivity of MI and low mass construction give almost instant response to temperature control. This performance solution eliminates thermal lag and temperature overshoot associated with ceramic knuckle heaters.

- Stainless steel cover as well as side fold design resist contamination by overflow of plastic or other free-flowing materials. Side folds turn to the inside diameter rather than the outside diameter.
- Permanently attached clamp bars eliminate cumbersome clamping straps, which makes installation easier.

Applications

- Extruders
- Blown film dies
- · Injection molding machines
- Other cylinder heating applications

Teflon® and Zytel® are registered trademarks of E.I. du Pont de Nemours & Company.

Ultem® is a registered trademark of General Electric Corporation.

Peek® is a registered trademark of Greene, Tweed & Company.

MI Barrel and Nozzle

Applications and Technical Data

The Physical Limitations of Variations table shows you the availability of widths, inside diameters and terminations for Watlow's MI Band heaters. To make sure the available terminations will meet your application needs, refer

to the illustrations of termination types on **page17**.

If you need to exceed limitations shown, contact your Watlow sales engineer or authorized distributor.

Physical Limitations of Variations

Widths inches (mm)

General Limitations:

- Maximum width of 1 inch (25 mm) diameter heater is 1.5 inches wide (38 mm).
- Maximum heater width = 2x heater diameter
- Minimum I.D. for Type B, C, E and H leads = 1 inch (25 mm)
- Minimum I.D. for Type B—90 Degree leads = 1½ inches (28 mm)
- · Maximum lead amps: 8.5A per pair
- Maximum amps (post terminals): 30A per pair

Standard Gaps:

- ≤ 3 inches = ½ inch nominal
- 3 inches ≤ 6 inches = ¼ inch nominal ±½ inch
- 6 inches ≤ 14 inches = ¾ inch nominal ±¼ inch
- > 14 inches = ½ inch nominal ±¼ inch

MI Barrel and Nozzle

Applications and Technical Data

Calculating Watt Density

Watt density is the amount of wattage per square inch of heated area. To determine watt density, divide the total wattage by the heated area.

Watt Density = $\frac{\text{Total Watts}}{\text{Heated Area}}$

To apply this equation we must define the term "heated area."

Heated area is the total contact surface of the heater less areas of no heat that are found around terminals, mounting holes, etc.

Heated Area = Total Contact Area - No-Heat Area

To calculate the heated area:

1. Locate the **no-heat factor** from the chart below that corresponds

Туре	Factor inch
1 pc. lead unit Type B, C,	
H, E or 90°B	1.37
1 pc. post terminal	1.60
2 pc. expandable post term	3.18
2 pc. expandable lead unit	3.00

- to the type of heater being considered.
- 2. To use the formula below, insert the no heat factors, diameter and width (in inches).

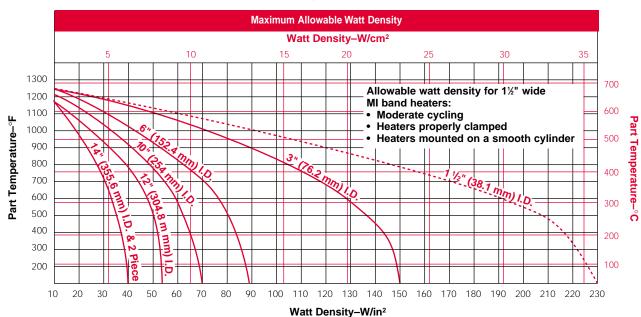

Heated Area = (3.14 x Diameter - No-Heat Factor) x Width

Maximum Allowable Watt Density

The following derating factors apply to the *Maximum Allowable Watt Density* chart, which are shown in both inch base and metric for your convenience. Please review these factors and the chart to determine the correct watt density curve for your application.

Derating Factors:

- For units over two inches (51 mm) in width, multiply watt density by 0.8.
- In applications where unusual operating conditions are present, such as irregular mounting surfaces, contact the Watlow factory in St. Louis, Missouri, for watt density limitations.
- For two-piece units used in vertical applications, refer to Clamping Matrix Application Guide, page 16.
- For applications where insulating blankets are used, multiply W/in² (W/cm²) by 0.75.

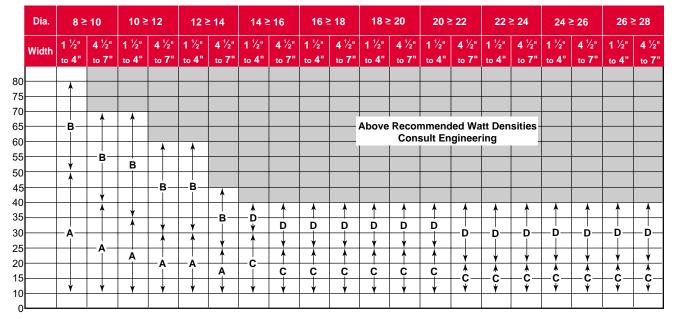

MI Barrel and Nozzle

Applications and Technical Data

- Review Watt Density chart on page 15 to ensure that the application does not exceed the maximum watt density at operating temperature after applying derating factors.
- · Locate clamping guideline for unit diameter, width and watt density.
- · Description of guideline letters are at lower left of page.
- Note: Upward arrows are up to and not including speci ed watt density. Downward arrows are greater than or equal to speci ed watt density.

MI Barrel and Nozzle Termination Variations

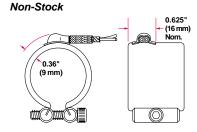

Leads Type B, Type B—90 Degree Rotation, Type B—180 Degree Rotation or Type C: Two fiberglass-insulated lead wires exit in a single metal braid for good abrasion protection, lead flexibility and wiring convenience. Leads are two inches (51 mm) longer than braid. Shipped with 12 inch (305 mm) leads, unless longer length is specified. To order, specify **type** and **length.**

Type B

Stock

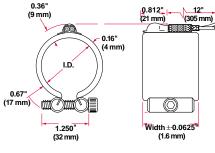

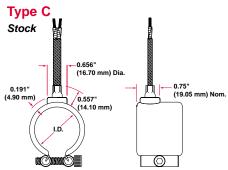

Type B—90 Degree Rotation

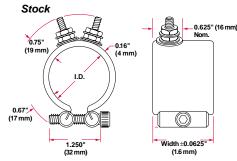

Type B—180 Degree Rotation

Stock

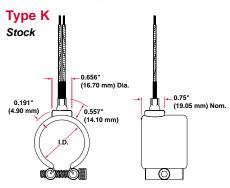

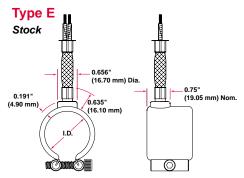

Post Terminals

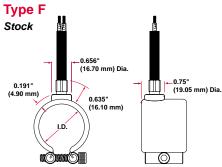

Post terminals provide optimum connections. Screw thread is 10-24. To order, specify **post terminals**.

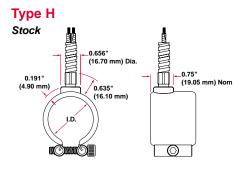

Type K: Flexible lead wires exit vertically from the heater. These leads can be bent adjacent to the heater for a quick and easy connection. To order, specify **Type K** and **length**.

Type E: Loose metal braid encloses two fiberglass leads for good abrasion protection, lead flexibility and wiring convenience. Leads are two inches (51 mm) longer than braid. Shipped with 12 inch (305 mm) leads, unless longer length is specified. To order, specify **Type E** and **length.**

Type F: Loose fiberglass sleeving encloses two fiberglass leads for additional insulation protection where high temperature or minor abrasion is present. Leads are two inches (51 mm) longer than the sleeving. To order, specify **Type F** and **length**.

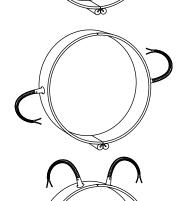

Type H: A flexible steel hose encloses the leads for maximum abrasion protection. Leads are two inches (51 mm) longer than hose. Shipped with 12 inch (305 mm) leads, unless longer length is specified. To order, specify **Type H** and **length.**

MI Barrel and Nozzle

Variations

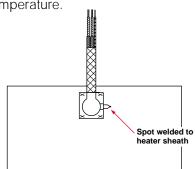

11/2" (38 mm) wide

Lead Wire

Heaters rated at less than 250V~(ac) use UL® approved lead insulation for operations to 480°F (250°C) as standard. Lead insulation UL® rated for operation to 840°F (450°C) is available for high temperature applications where the leads are shrouded or enclosed with the heater. These leads are available in any of the Type B with loose braid, as well as Types E, F and H lead configurations. All heaters rated at more than 250V~(ac) use this wire. When ordering, specify **850°F** (450°C) wire.

Thermocouple

ASTM Type J or K internal thermocouples are available on lead Type B with loose braid. The thermocouple junction, which is welded inside the lead cap or spotwelded to heater sheath, provides a signal for measuring relative heater temperature.

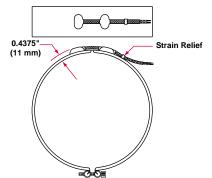

Expandable Heaters With and Without Leads

Expandable heaters are two-piece units with a common top metal that allows the heater to expand open to the full diameter of the barrel. On expandable bands, each half will be one half of the total wattage. Plus, on both expandable and two-piece bands, each half will be rated at full operating voltage, unless otherwise specified.

MI Band heaters 1½ inches (38 mm) wide or greater will have post terminals located next to the expansion joint. Leads may be located anywhere along the circumference except near the gap and at the expansion joint. Two sets of leads required.

On one inch (25 mm) wide

MI Band heaters, post terminals will be located 90 degrees from the expansion joint. Leads may be located anywhere along the circumference except near the gap and at the expansion joint. Two sets of leads required. To order, specify **expandable.**

Type SLE

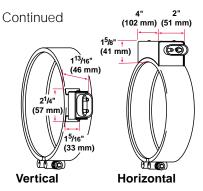

Two fiberglass lead wires exit a single tightly woven metal braid at right angle on the expandable construction verses two sets of leads. Minimum diameter

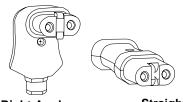

UL® is a registered trademark of Underwriter's Laboratories, Inc.

capabilities is four inches (100 mm). Minimum width capabilities is 1½ inches (38 mm). To order, specify **Type SLE** and **length.**

MI Barrel and Nozzle

Variations

Right Angle Code# N6027AF049

Straight Code# N6027ZZ028

High Temperature "Quick Disconnect" European Style Plugs

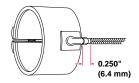

They provide the simplest and safest way to apply power to band heaters. The combination of high temperature male and female quick disconnect plug assemblies eliminates all live exposed terminals and electrical wiring that can be a

potential hazard to employees or machine. Maximum 15 amps at 240V~(ac), maximum volts 240. To order, specify **vertical** or **horizontal** European plug.

High Temperature "Quick Disconnect" European Style Female Adaptors

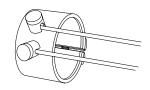

Available as an accessory item that must be used in conjunction with high temperature "quick disconnect" European style plugs.

To order, specify code number **N2027AF049** or **N6027ZZ028** and quantity.

Heavy Duty Strain Relief

Heavy duty strain relief is recommended for applications where there is great stress or continued flexing of the leads. The strain relief is available on Type B, Type B—90 Degree and Type B—180 Degree leads only. To order, specify **heavy duty strain relief.**

3¹/₂" for 3¹/₂-5¹⁵/₁₆" I.D. 4" for 6-28" I.D. 1⁷/₁₆" (37 mm)

Ceramic Terminal Cover

Ceramic covers, with openings for leads, are screwed on to post terminals, providing a convenient, economical insulator. To order, specify code number **Z-4918** and **quantity.**

Metallic Terminal Box

Metallic terminal boxes are available from stock on 3½ inches inside diameter x 1½ inches wide (89 mm x 38 mm) or larger heaters. Terminal boxes, which attach directly to the heater, act as a safety feature by covering the terminals. Conduit may be attached to the box through ½ inch (22 mm) diameter holes in the ends

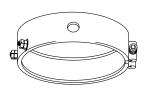

of the box. Two piece heaters require two boxes. To order, specify **terminal box.**

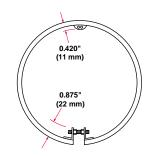

Oversized terminal boxes are available on heaters two inches (51 mm) and wider. Consult a Watlow representative.

MI Barrel and Nozzle

Variations

Continued

MI Band Heater With Holes

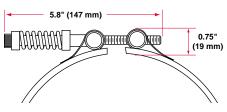

MI Band heaters with holes are available on all widths except one inch wide. Consult the Watlow factory in St. Louis, Missouri for hole sizes and location restraints. To order, specify **hole size** and **location.** Three inch inside diameter minimum.

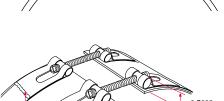

Outside Diameter Heater

Two fiberglass insulated lead wires rated to 840°F (450°C) exit a metal braid 180 degrees opposite from gap, Type B outside diameter

designed and constructed to mate with inside diameter of cylinders. To order, specify **outside diameter** heater.

Clamping Variations

Tig Welded Barrel Nuts With Spring Loaded Clamping

Welded barrel nuts with spring loaded clamping are used during start-up to maintain a tight heater fit on large barrels. This clamping variation is standard for all MI Band heaters that are greater than 14 inches (355 mm) in diameter and

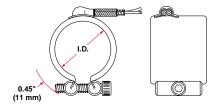

1½ inches (38 mm) or greater in width. Refer to MI Band Clamping Matrix Application Guide, page 16. For smaller diameter heaters, it is an option and must be ordered separately. To order, specify spring loaded clamping.

Tig Welded Barrel Nuts

An ideal way to provide access for instrumentation is to specify an oversized gap between the heater ends. If the clamp bar screw interferes with the positioning of the instrumentation device, welded barrel nuts are recommended. To order, specify **tig welded barrel nuts** and **gap dimension** when ordering.

Low Profile Tig Welded Barrel Nuts

Low profile barrel nuts are available on all widths. Low profile barrel nuts have a clearance of 0.406 inch (10 mm). To order, specify **low profile tig welded barrel nuts**.

Low Profile Clamp Bars

Low profile clamp bars are available on both one (25 mm) and 1½ inch (38 mm) wide heaters, for wider widths consult factory. The bars are

¼ inch (6 mm) diameter with an 8-32 screw. To order, specify **low profile clamp bars.**

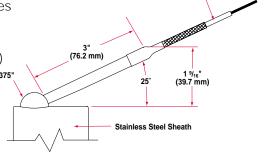

MI Barrel and Nozzle

Sealed MI Nozzle Heater

Hermetically sealed tube construction makes this heater contamination proof and an excellent choice for a longer life in impure environments.

Non-Stock Options

- Leads greater than 12 inches (305 mm)
- Extended tube length (3 inch (76.2 mm) standard)
- 90° rotation Type B leads R.375"

12" (305 mm) Standard Type B Lead Wire Length

How to Order

To order your stock MI Band heater, specify:

- Quantity
- Watlow code number
- Options
- Lead type and length, or terminal type configuration (If code number has an "N" as the

last letter in the code, you must specify termination type and lead length. Twelve inch leads will be supplied if not otherwise specified.)

Availability

Stock: Same day shipment on MI Band heaters with post terminals or 12 inch (305 mm) Type B leads.

Longer lead lengths or other terminations will ship next day.

F.O.B.: St. Louis, Missouri

Made-to-Order: If stock units do not meet application needs, Watlow can manufacture MI Band heaters to special requirements. Please consult a Watlow sales engineer or authorized distributor.
